

Evolving unique chemical company

Third Quarter, 2014 Financial Results

- Consolidated -

SHOWA DENKO K.K.

October 30, 2014
(Corrected on April 25, 2017)

Saburo Muto, CFO

Performance forecast and other statements pertaining to the future as contained in this presentation are based on the information available as of today and assumptions as of today regarding risk factors that could affect our future performance. Actual results may differ materially from the forecast due to a variety of risk factors, including, but not limited to, the economic conditions, costs of naphtha and other raw materials, demand for our products, market conditions, and foreign exchange rates. We undertake no obligation to update the forward-looking statements unless required by law.

Consolidated Companies

- Consolidated subsidiaries: 47
No changes from the end of June

5 companies newly consolidated, compared with the end of 2013
 Shanghai Showa Chemicals Co., Ltd.
 Zhejiang Quzhou Juhua Showa Electronic Chemical Materials Co., Ltd.
 Showa Denko Aluminum (Nantong) Co., Ltd.
 Hanacans Joint Stock Company, BE International Corporation

- Equity method applied: 12
Excluded 2 from the end of June

Kofu Gas Center K.K. (Chemicals segment, liquidated)
 Takasaki Gas Center K.K. (Chemicals segment, liquidated)

3 companies excluded, compared with the end of 2013

Tokyo Aluminum Wire Co., Ltd.
 Kofu Gas center K.K.
 Takasaki Gas center K.K.

Topics

[General]

● Increase of capacity to produce 6” SiC epitaxial wafers for power devices

In September, SDK increased its capacity to produce silicon carbide (SiC) epitaxial wafers with a diameter of six inches for use in power devices from 400 units a month to 1,100 units a month. SDK also started shipping of a new grade of SiC epitaxial wafers with improved quality, to be used in power control modules for automobiles and other applications that require heavy withstanding currents. When compared with the currently mainstream silicon-based semiconductors, SiC-epitaxial-wafer-based power devices can operate under relatively high-temperature, high-voltage and heavy-current conditions, while substantially reducing energy loss. With these features, SiC power devices are expected to be in greater demand for use in automobiles, power sources for servers, electric trains, decentralized power generation systems utilizing new energy sources, and other applications. The market size of SiC power devices is expected to grow to be about 30 billion yen in 2020. SDK will continue meeting market needs for quality, and contribute to the extension of SiC power device market.

● Repurchase of own shares

At its Board of Directors’ meeting held on July 31, 2014, SDK resolved to repurchase its own shares in order to ensure shareholder returns and facilitate flexible implementation of capital policy in response to changes in the business environment. SDK started the repurchase on August 1, 2014 and completed it on September 22, 2014. Accumulated total number of shares repurchased was 68,261,000 (equivalent to about ¥10 billion).

Topics

[Petrochemicals segment]

- Decision to dissolve PT. Showa Esterindo Indonesia

SDK decided to terminate production of ethyl acetate at its subsidiary PT. Showa Esterindo Indonesia (SEI) by the end of this year, and dissolve and liquidate SEI after demolition and removal of the production facilities. SEI started to produce ethyl acetate in 1999 as SDK's first plant to introduce our proprietary technology to synthesize ethyl acetate by adding ethylene directly to acetic acid, and had been providing stable Southeast Asian market with ethyl acetate since then. In recent years, however, the business environment for SDI has become harder than before because of rises in material prices and expansion of the capacities of neighboring countries to supply ethyl acetate. Under these circumstances, SDK and its partners have concluded that it is difficult to continue SEI's operations, and decided to dissolve the company.

[Chemicals segment]

- Acquisition of Air Products' high-purity chlorine business in Taiwan

In order to strengthen its special material gas business, SDK decided in July to acquire a high purity chlorine business including production facilities located in Kaohsiung, Taiwan, which had been owned by Air Products San Fu Co., Ltd, a subsidiary of Air Products and Chemicals Inc. (APCI). The demand for high-purity chlorine used as an etching gas in the manufacturing process of semiconductors and LCDs is increasing, and the annual market size of the gas is expected to be about 2,000 tons in 2015. The SDK Group has production facilities for high-purity chlorine with annual production capacity of 1,000 tons in its Kawasaki Plant. By having additional high-purity chlorine production facilities in Taiwan, the SDK Group aims to ensure further stable supply of high-purity chlorine to the growing market in East Asia.

Topics

[Electronics segment]

- Starting to mass-produce highest capacity 3.5-inch HD media

The leading-edge 3.5-inch hard disk (HD) media produced and sold by SDK have been introduced into 8 TB hard disk drives (HDDs), the world's highest storage capacity HDDs to date. The 3.5-inch HD media introduced this time use the perpendicular magnetic recording (PMR) technology, and are classified as the seventh generation products of the HD media based on the PMR technology. SDK pioneered in producing and selling HD media using the PMR technology in 2005. The number of shipment of HDDs, especially those for the use in storage servers in data centers, is expected to increase very rapidly because of the increase in data generation accompanying the extension of cloud computing. The number of shipment of HD media, which are major components of HDDs and decide the storage capacities of them, is expected to show annual rate of increase of about 3%. As the world's largest independent HD media supplier, SDK will aim to ensure stable supply of high-capacity media. SDK will also continue meeting customer requirements in terms of quality as well as quantity.

[Inorganics segment]

- High-performance photocatalyst LUMI-RESH to be applied to membrane building material

High-performance photocatalyst LUMI-RESHTM which was developed by Showa Denko Ceramics Co., Ltd., a subsidiary of SDK, is to be applied to an indoor-use membrane building material "Hikari-Protexile" which is manufactured and marketed by Taiyo Kogyo Corporation, the leading membrane building material manufacturer and membrane structure builder. Hikari-Protexile is to be put on the market in January 2015. It has already been confirmed in our laboratory that, compared to conventional photocatalysts, which are usually activated by ultraviolet rays much included in sunlight, LUMI-RESHTM can be activated even by visible low-energy light and inactivate bacteria and viruses. The high antiviral property of LUMI-RESHTM is expected to be recognized as a technology to reduce infection risk of viruses including influenza virus and norovirus. By further improving performance of photocatalysts, the Showa Denko Group will contribute to people's healthy, safe and sound life.

Topics

[Aluminum segment]

● Decision to expand the capacity to produce high-purity aluminum foils in China

SDK decided in July to expand its capacity to produce high-purity aluminum foils for aluminum electrolytic capacitors in China. Aluminum electrolytic capacitors are used in wide areas, including electric appliances, IT devices, electric vehicles, hybrid cars and equipment for power generation with renewable energy sources. The demand for electrolytic capacitors is expected to increase especially in China. By expanding the productive capacity of Showa Denko Aluminum (Nantong) from 400 tons a month at present to 600 tons a month by January 2015, SDK will ensure stable supply of high-quality high-purity aluminum foils and continue responding the expansion of the market of aluminum electrolytic capacitors in a timely manner.

[Others segment]

● Completion of the expansion of production lines for LIB packaging laminates

Showa Denko Packaging Co. Ltd., a subsidiary of SDK, completed the expansion work of its productive capacity for aluminum laminated films used for packaging lithium ion batteries (LIBs) at its Hikone Plant in Shiga Prefecture, and started mass production with the expanded lines in July. As a result of this expansion work, Showa Denko Packaging's productive capacity for aluminum laminated films was increased to be three times as much as that in 2010. The market for aluminum laminated films used for LIB packaging continues expanding. Specifically, not only the demand for small LIBs used in smart devices such as smartphones and tablets is growing, but also the demand for large LIBs is expected to grow due to the progress in the electrification of cars. The Showa Denko Group aims to ensure stable supply of high-quality materials for LIBs whose market is growing dramatically.
